

DATA COMMUNICATIONS

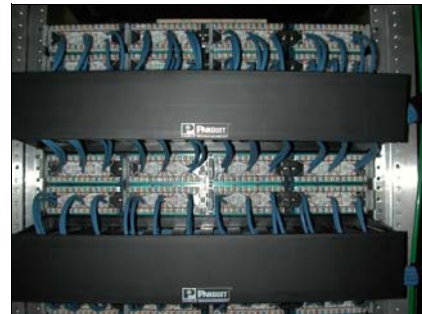

Gettle Incorporated presently serves over 100 businesses throughout the Mid-Atlantic region.

BEFORE: IBM Type-1

AFTER: CAT5e

**LINCOLN MIDDLE SCHOOL
SCHOOL DISTRICT OF LANCASTER
Lancaster, PA**

Upgrade from IBM type-1 to CAT5e cabling at Lincoln Middle School. Upgrade was performed while tediously keeping the type-1 cabling in service until the CAT5e system was completely certified. Basket tray was used to support the cabling and the service loop behind the rack in the MC. J-hook cable supports were used throughout the rest of the building to support the cabling. There is one MC with two IC cabinets. IC's are connected to the MC via 50-micron fiber optic cable. Each of the 351 cables was CAT5e certified. The fiber was tested at 850 and 1300nm. This project is an example of many that we have performed for the District's high school, middle school, elementary school, and administration building. To-date we have installed upwards of one million feet of CAT5e cable.
