

# INDUSTRIAL SERVICES

*Gettle Incorporated presently serves over 100 businesses throughout the Mid-Atlantic region.*

## **COATES ELECTROGRAPHICS (A SUN CHEMICAL COMPANY) York, PA**

Gettle Incorporated began its relationship with Coates Electrographics following their acquisition of the bulk toner manufacturing business of Turbon International in 2001. Gettle installed the original toner plant for Turbon International and has continued to help Coates Electrographics personnel to improve on machine reliability and safety. Gettle has had the privilege of working directly with the personnel at the York plant in implementing the electrical aspects of these improvements. Some of the larger projects have involved working with engineers and project designers from their headquarters in the United Kingdom. The latest upgrade was to completely rewire and design new power/control cabinets for one of the toner lines. The upgrade involved coordination with the York Plant as well as engineers in the U.K.

The scope of work demanded the demolition and rebuild of the existing electrical system from power feeders to automated controls. Gettle was responsible for the layout, construction and installation of the new control panels. The project also required replacing power feeders, motor feeds and control wiring. The automation experts and panel fabrication personnel at Gettle worked hard to prepare the panels while field personnel started the groundwork for the change over. Due to the preparedness of the foremen and onsite crew along with all those involved, the change over was a success and the plant is back in full operation with a more user friendly and documented system.

We greatly appreciate the relationship we share with Coates Electrographics. We look forward to assisting them with future upgrades as they continue to move forward in their business endeavors.
