

INDUSTRIAL SERVICES

Gettle Incorporated presently serves over 100 businesses throughout the Mid-Atlantic region.

YORK CONTAINER COMPANY **York, PA**

A leading manufacturer in corrugated paper, York Container's electrical needs as with most manufacturers, is ever changing. Gettle Incorporated recognizes and strives to meet those needs through quality design and installation. A key aspect in this relationship is to meet their needs on time and with little to no interruption to production. The most recent venture involved the installation of a sheet fed flexo press for corrugated paper. This project consisted of several different phases of electrical design and installation.

The first phase was to design and install a new 13,200 volt primary service. This installation consisted of a primary feeder, a 2500 kva transformer, and a 3000 amp 480/277v power distribution switchgear. This first phase was completed, including the medium voltage tie in without interruption or inconvenience to the customer. While in the process of completing the new primary service installation, construction of the secondary power feeders began. With this part of the installation came the construction of one 1000 amp and one 1200 amp feed for the press along with smaller feeders and sub panels. This phase also involved coordination with the owner and all companies involved in the installation, from rigging contractors to the equipment manufacturer and installers. The final phase of this project involved working directly with the press manufacturer and support equipment providers. Gettle worked directly with these companies interconnecting and supplying power feeds and controls to the various areas of the 120' long press.

Gettle has since been involved with other installations for York Container and we look forward to assisting them with their ever changing electrical and communications needs in the future.
